

REGA BEVELS

the definitive collection 2008 edition

NOW INCLUDING FUSION TILES

add a touch of
elegance

fanlight bevels ♦ **door** bevels ♦ **cabinet** bevels ♦ **designer** bevels ♦ **jewels**
fusion ♦ **fusion**lite ♦ **vetro** suit

£3.50 €5.00

the best ever

choice of creative
options for
decorative glass

RegaBevels are part of a range of decorative glass overlay products offered by RegaLead. When used in conjunction with RegaLead lead profiles and Stained Glass Art Films the results can be stunning - art glass creations of the highest quality. With our overlay system, all products are designed to be applied to a single surface of glass to create dazzling leaded panels. Our ever-expanding range of products has been inspiring the Glass & Glazing industry for many years, adding individual style, colour appeal and value to property. All Regabevels are precision made from 5mm float glass that bevels down to a 1.8mm edge so they fit precisely with RegaLead lead profiles.

Regalead pioneered the art of bevelled glass design in the UK and the 2008 brochure includes over 120 new bevels - Dichroic, cabinet styles and more clear and coloured designer collection bevels.

We have also added the increasingly popular Fused Glass Tiles - Fusion, Fusion Lite and Vetro Suit. Made from small pieces of "Spectrum" coloured and clear glass fused together; the tiles can be bonded to flat glass to give a more colourful alternative to bevels.

- **Clear bevels** - more than 480 in this year's collection.
- **Coloured bevels** - pale blue, green, grey and bronze colour options that change in density when viewed from different angles, adding a real touch of class to any project.
- **Dichroic bevels** - a range of textured bevels that reflect and refract the light, changing colour when viewed from different angles.
- **Glue chip bevels** - the surface of the bevel is textured and the bevelled edges are clear giving a sparkling visual effect. These bevels offer almost total obscurity making them ideal for use in door panels and other applications where privacy is important to your client.
- **Multi-faceted and double-faceted bevels** - these feature bevels add extra prisms to the light refraction and glitter more than the standard bevel edges.
- **Concave bevels** - featuring a new technique in which a concave 'dish' is taken out of the bevel's surface creating extra brilliance and further levels of privacy.
- **Seamed bevels** - suitable to use without lead profiles, the edges of these bevels have been repolished to remove rough cut marks (that would normally be covered by the lead profile) and are marked as 'seamed' throughout this brochure.
- **Bespoke bevels** - we're convinced that what we have created with this edition of our 'definitive' bevels collection will stimulate and inspire you, but if you have an idea of your own that you would like to turn into reality, we can now offer a Custom Beveling service which is detailed on page 58.
- **Fusion** - the original range of fused glass tiles, designed using 12 colours to match most composite doors and interior applications with an edge thickness of 6mm.
- **Fusion Lite** - developed for use in decorative grilles and traditional lead came, the Fusion Lite range has a 2mm edge thickness and is also designed using 12 colourways.
- **Vetro Suit**

For details of the Fused Tile ranges see pages 60-71.

uv-tek

for the scientific
application of bevels

RegaLead was instrumental in the development of the UV-TEK system, now acknowledged as the most advanced and successful method of bonding bevels to glass surfaces.

The UV-TEK system is based around an ultra-fast-cure UV adhesive with a unique formula and is supported by a CE-approved lightbox curing unit with bespoke templates and accessories. Combined these ensure an accurate, rock-solid and permanent bond in just 30 seconds.

The system has been weather and time tested both here in the UK and in Australia where UV-TEK cure bonded bevel assemblies withstood more than 1,000 hours with zero failures, when tested to ASTM-G53-94 standards.

The UV-TEK system is recognised as THE method for bevel application. RegaLead offers personal training for customers and a training video is also available as part of the package

marketing support

For further details of these and other marketing support material please contact RegaLead Marketing on 0161 946 1164

To help customers market the RegaBevel range we offer a suite of marketing aids including colour brochures and design software.

Our 'Distinctive Door Panels' and 'Creative Options for Fanlights' brochures are packed with photographed design ideas using RegaBevels in conjunction with RegaLead profiles and Stained Glass Art Films. We also offer customised overprinting on our existing brochures for users who need a more personalised marketing package.

To help with the design of decorative glass panels using our ranges of bevels and coloured films we offer a customised software solution. GlassEye 2000R is a CAD drawing package specially developed for designing overlay and traditional stained glass. It comes preloaded with all our bevel designs, film colours and brochure designs so users can either just change the design size and print or design custom panels from scratch. We offer a free 30 day limited features trial on this software and also offer training at either your premises or in our own studio.

THE DESIGNER COLLECTION

ALL DESIGNER COLLECTION BEVELS HAVE SEAMED OR POLISHED EDGES FOR USE WITHOUT LEAD

Now a firmly established favourite with decorative glass studios, the RegaLead Designer Collection is a simple, yet innovative concept for creating imaginative bevel designs for windows, doors and fanlights. Using just the 34 basic bevel shapes illustrated, and the full-size positional templates that are also available, you can assemble them into an almost infinite number of combinations enabling you to create a virtually endless range of attractive designs. Sizes are shown as the bevels are in position on the page and will vary depending on how the bevels are used in the design.

NOTE: All bevels in the Designer collection are supplied in packs of ten.

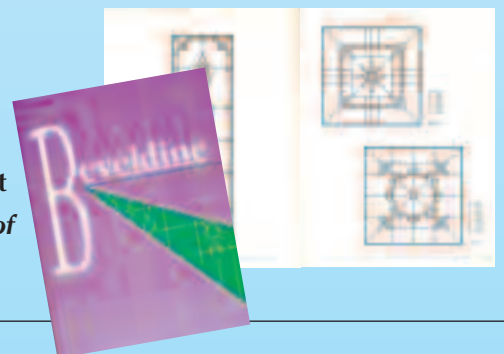

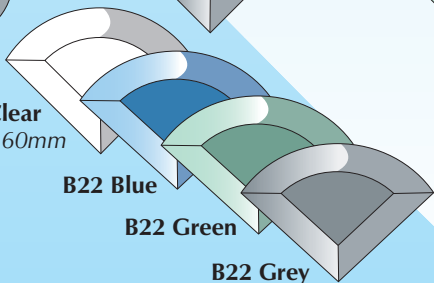

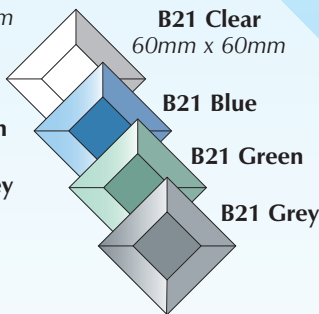

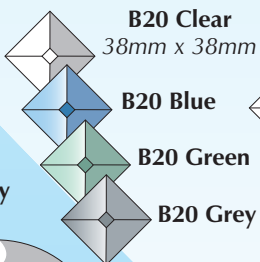

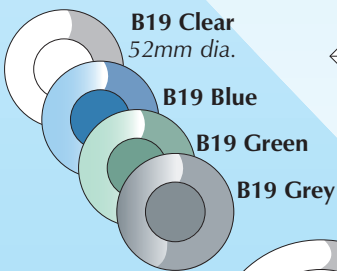

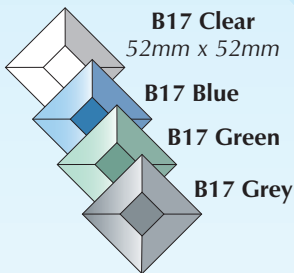

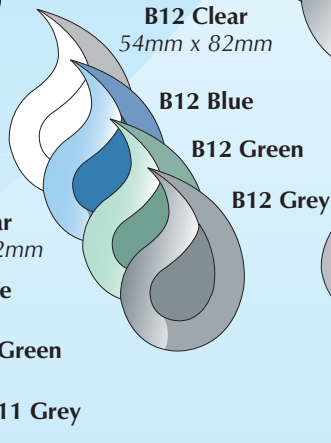

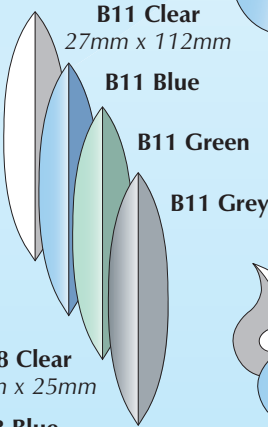

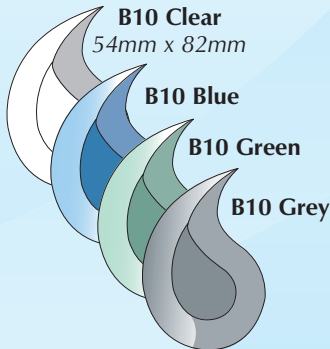

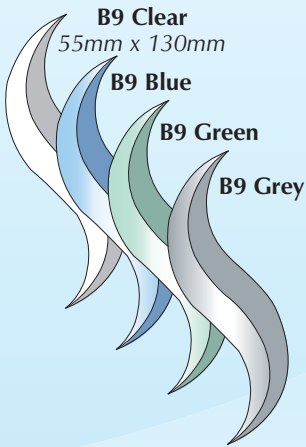

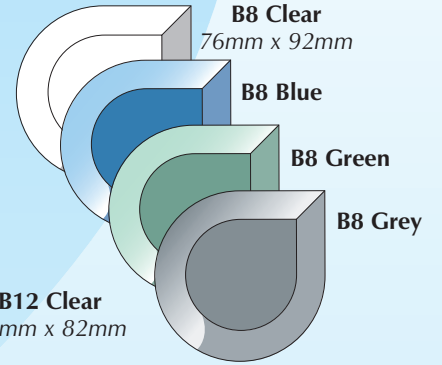

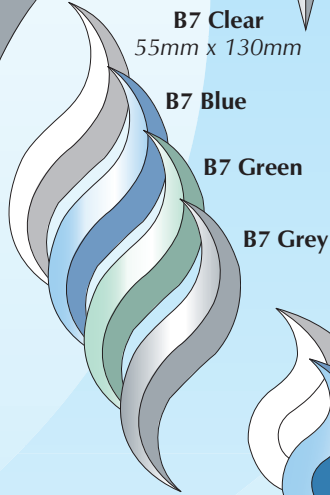

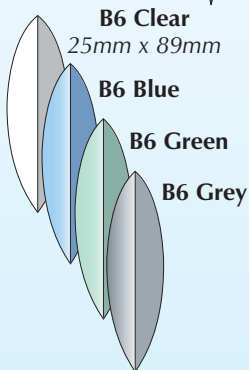

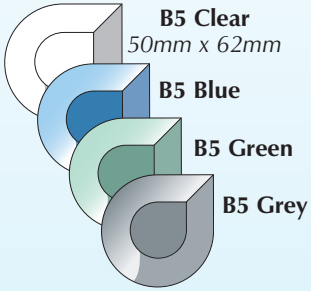

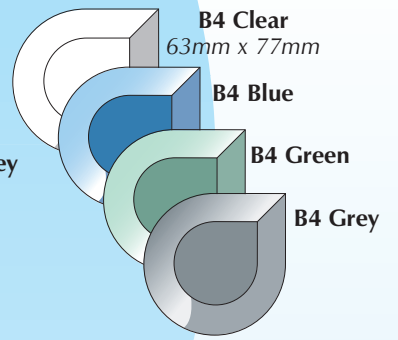

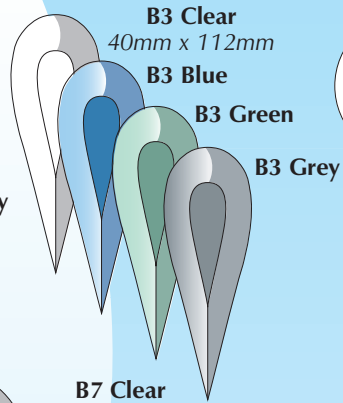

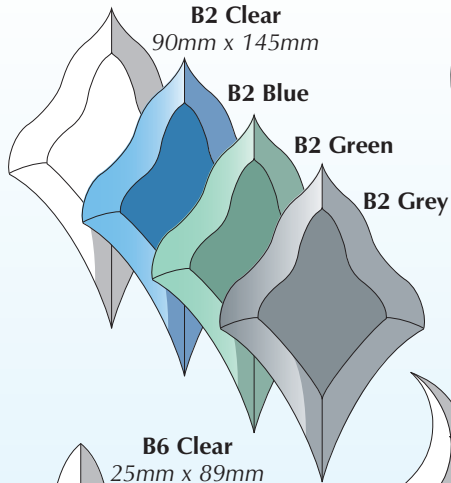

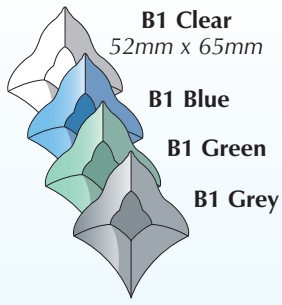

THE INSPIRATION FOR INNOVATION

See pages 10 and 11 for a superb selection of designs achieved by using just the 19 basic shapes in the original designer collection. Each design is also accompanied by a 'Shopping List' which identifies the bevels required for its assembly.

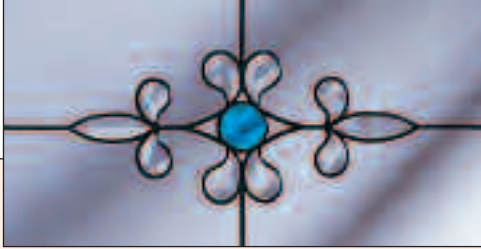

GET EVEN MORE FROM THE DESIGNER COLLECTION

The 'Beveldine' Book available from RegaLead, has 58 pages illustrating a huge library of multi-bevel designs all of which can be achieved using the original 19 Designer Collection bevels. Each featured design includes a comprehensive list of the bevels required, plus finished production dimensions. *To obtain a copy of the Beveldine book, contact RegaLead sales office.*

All dimensions are in millimetres and are approximate.

ENDLESS POSSIBILITIES!

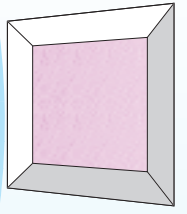

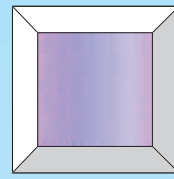

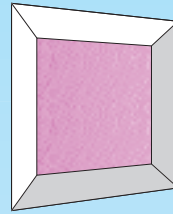

Dichroic bevels are made by applying a special coating to textured glass, which reflects and refracts the light, changing colour when viewed at different angles. In reflected light the Dichroic glass shows yellow, moving through pink, purple and blue in transmitted light.

NOTE: Due to the nature of the glass and the printing process, colours shown cannot be regarded as completely accurate representations and are intended only as a guide.

Clear, Frosted and Glue Chip

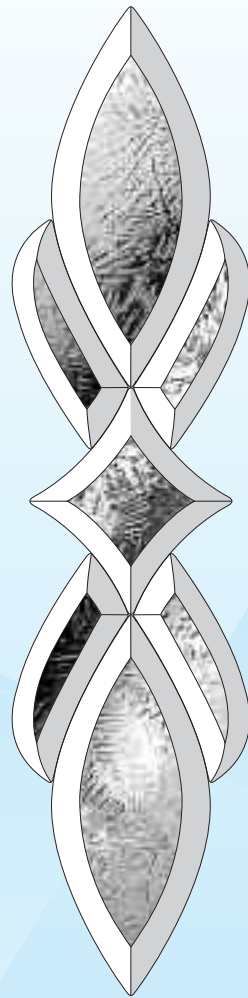

GLUE CHIP BEVELS

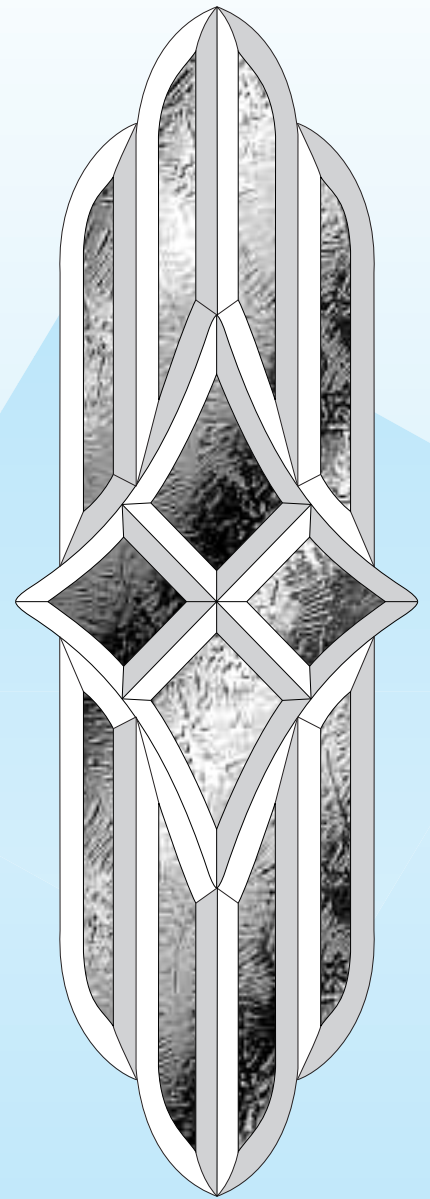

RegaLead glue chip finish is created by employing the authentic age-old traditional technique of applying a strong glue coating to the surface of the glass and then removing it to leave the distinctive textured appearance.

DICHROIC FANLIGHTS & FEATURE BEVELS

Dichroic bevels are made by applying a special coating to textured glass, which reflects and refracts the light, changing colour when viewed at different angles. In reflected light the Dichroic glass shows yellow, moving through pink, purple and blue in transmitted light.

NOTE: Due to the nature of the glass and the printing process, colours shown cannot be regarded as completely accurate representations and are intended only as a guide.

CUSTOM BEVELLING

RegaLead's custom beveling service has been introduced to create more design options for window, door, conservatory and other decorative glass suppliers. Designs are no longer restricted by size, colour or design of bevels currently available in the marketplace. Now customers can design their own bevels, have a logo made in bevelled glass, change the size or colour of any of the RegaBevels range currently available or have a bevel designed for a project.

Ideal for any bevelled window or door suppliers from small studios to large contractors, any quantity of custom bevels can be supplied from one to thousands. Prices are based on the size

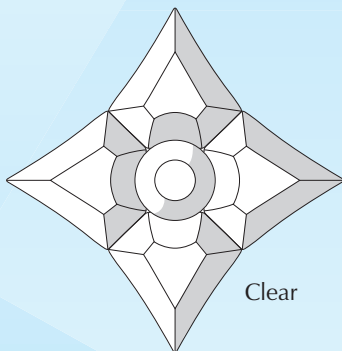

and complexity of design and each design is quoted individually.

Discover how the brilliance and beauty of hand crafted custom bevels can add an extra dimension to your designs.

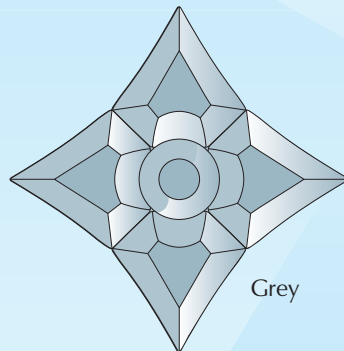

Colours & Textures

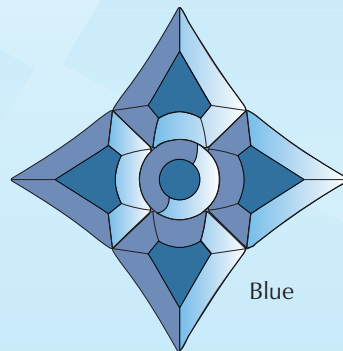

Custom bevels are currently available in the following colours and textures:

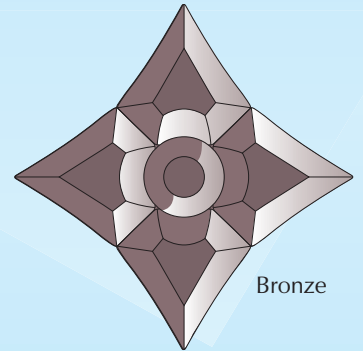

Clear

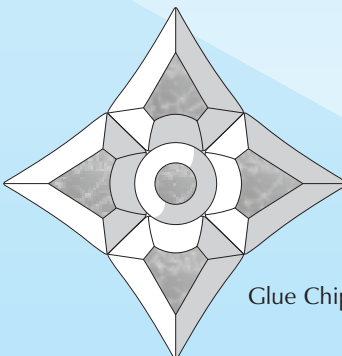

Grey

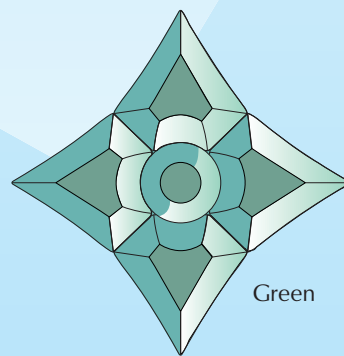

Blue

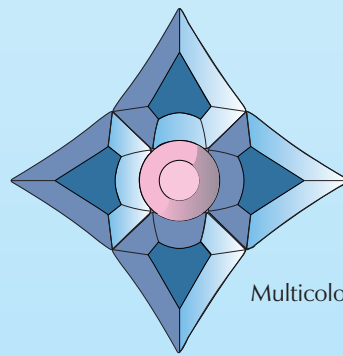

Bronze

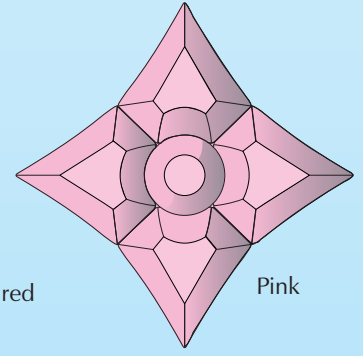

Glue Chip

Green

Multicoloured

Pink

Bevelled Edges

Glass is 5mm thick. Edge thicknesses available are:

Standard Edge - for overlay

- between 1.5mm and 1.8mm thick

Thick Edge - for traditional stained glass using lead came - approx 2.5mm thick

Seamed Edge - highly polished for use without any lead around the edge

Ordering a Custom Bevel

Send a sketch or design idea, with dimensions and quantity required.

We will produce a quotation. If the quotation is acceptable we will produce the design template (if required) and order a sample bevel for you.

Pricing

Prices are based on:

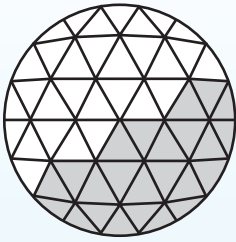

- A design fee for the template, charged only once per design
- A set-up charge, charged only once per design
- The cost of the beveling and the glass

The larger quantity you order the more cost effective it is.

Glass jewels are hand made therefore slight variation in colour and small "seeds" can occur.

RegaLead's range of fused tiles was first introduced in 2002 to give customers a simple, cost effective method of creating contemporary decorative designs without the need for expensive fusing equipment. Historically fused glass has been expensive due to manufacturing techniques but our range of fused glass tiles offers a luxury product, manufactured using traditional techniques, for a fraction of the cost normally associated with fused glass.

Fused glass is created by slowly heating the pieces of cut glass in a kiln until they fuse together, then slowly cooling them. To fuse glass successfully it is essential that the pieces of glass used are "tested compatible" for fusing otherwise the glass can become brittle and liable to break. For this reason we only use Spectrum™ glass from the USA in the Fusion™ and Fusion Lite™ ranges and Murano glass from Italy in the Vetro range.

We offer 3 distinct ranges of fused tiles to give our customers the widest range of styles and possible applications - Fusion™, Fusion Lite™ and Vetro. The Fusion™ and Fusion Lite™ ranges are very consistent in colour and size and have smooth highly polished backs to ensure a perfectly flat surface for UV bonding. Most of the Fusion and Fusion Lite tiles are made from transparent glass. However, a few use Opaque glass and these are indicated in the brochure by "OP" after the code.

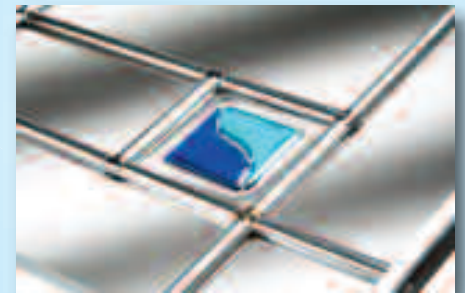

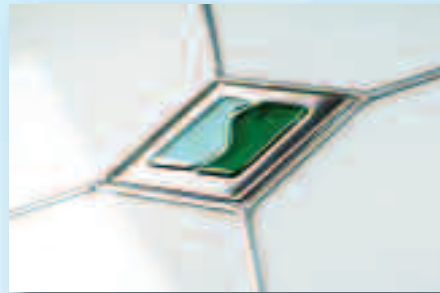

Fusion™

Our original Fusion™ tiles, as well as being extensively used in the window and door market, are ideal for use as feature pieces on shower screens or mirrors. We offer over 80 designs in 5 colour ways to create a range of tiles that complement each other in the finished work. Our recent additions to this popular range have been a selection of clear tiles made from textured glasses that give a stunning 3 dimensional effect. Fusion™ tiles have typically 6mm thick edges.

Overlay Lead - the thinner edges give the tiles a sharper shape definition than the standard Fusion™ tiles so they are ideal for applying adhesive lead around. Designers can now incorporate Fusion Lite™ into overlay panel designs in the same way as glass bevels.

Aluminium Grille Systems - as the products are dimensionally accurate to within 1mm and have 2-3mm edges they are ideal for inserting into the increasingly popular decorative grille systems that are available in the market. The angles on the diamonds are 55° and 125° to suit the most popular systems.

Fusion Lite™

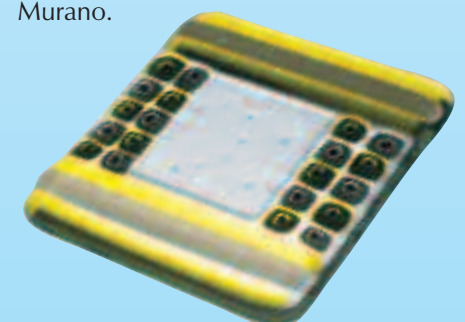

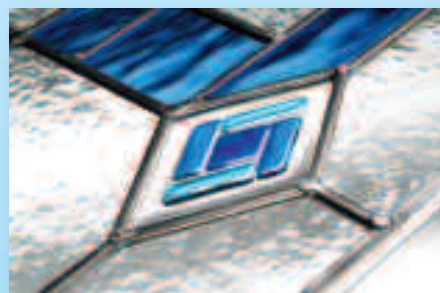

Fusion Lite™ is our latest range. The 48 tiles are available as diamonds and squares in four transparent colour ways as well as the new opaque neutral colours. With the 2-3mm edges on these tiles a whole range of new applications are available to glass designers -

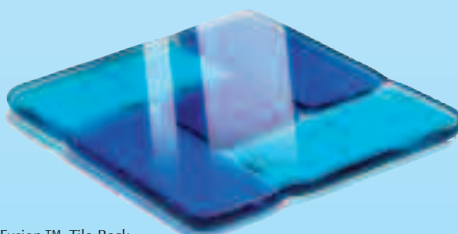

Traditional Lead Comes - the thinner edges also allow the product to be used in traditional lead or zinc comes with a standard 3mm channel. Designers can now effectively combine traditional techniques and contemporary fused glass pieces to create modern leaded light designs.

Vetro Suit

With this range of luxury fused tiles we bring designers a touch of Italian design style and a wider range of shapes than with our Fusion™ ranges. Vetro tiles are manufactured in Italy using Murano glass which has for centuries been used by the glass craftsmen of Venice to create stunning fused glass works. In addition to the transparent Murano glass many of the Vetro tiles incorporate pieces of Millefiori meaning "thousand flowers", which is a decorative glass technique unique to the island of Murano.

UV Bonding - As with standard Fusion™, the Fusion Lite™ pieces have smooth polished backs so are suitable for UV bonding.
